

Advanced Purified Bottled Water Sourced From Wastewater

G | W | R | S

GROUNDWATER REPLENISHMENT SYSTEM

40 years of water reuse technology and experience is now available in a bottle!

The Groundwater Replenishment System (GWRS), an Orange County Water District and Orange County Sanitation District collaboration, is the largest project of its kind in the world.

The GWRS returns 100 million gallons of reused water daily to the Orange County Groundwater Basin, a source of water for 2.4 million people.

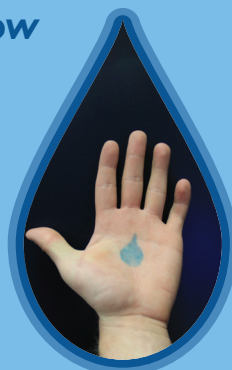

Using a three-step advanced purification process, similar to how space station astronauts reuse their water, the GWRS purifies water to near-distilled quality.

Today, the state of California, thanks to AB 2022, allows GWRS advanced purified water to be bottled - a first in California and the Western Hemisphere.

Tastes like water because it is water!

Take the #H2ODrop pledge to show your support of water reuse for drinking water purposes.

Simply draw a water droplet on your palm and share on social media using #H2ODrop.

Follow our bottled water roadshow this spring:
