INFORMATIONAL ITEMS

2. GWRS Operations Update

Executive Director Mehul Patel reported that the daily production for the quarter, July through September 2024, was 89 mgd. He advised that production was limited during this reporting period due to a major treatment plant issue at OC San that reduced available flows to GWRS. He reported that the impactful OC San issue was a major leak and subsequent pump failures to the Plant No. 1 Sunflower trunkline and pump station which resulted in a reduction of Plant No. 1 flows and an increase to Plant No. 2 flows. He recalled that the Sunflower trunkline and pump station issues at Plant No. 1 started on April 30, 2024 and initially limited GWRS production to 55 mgd until May 21, 2024. Mr. Patel stated that in May a partial resolution of the issue allowed for higher flows to Plant No.1 and an increase in GWRS production to 90 mgd. He stated that a full resolution of the Sunflower pump station issue will not be achieved until October 15 thus limiting GWRS production to 90 mgd for a total duration of ten months.

3. GWRS Third Quarter Outreach Report (July - September)

Principal Communications Specialist Crystal Nettles provided an overview of outreach for the third quarter of 2024. She stated there were 27 GWRS tours during the third quarter of 2024, which accounted for 384 guests. She advised that there has been a steady increase in tours over the past couple of years with people coming back for in-person tours after the pandemic. Ms. Nettles provided an update on the Next Generation Water Leaders (NGWL) Education Program. She stated that there is an overwhelming interest in the program which needs updating to meet educational standards and maximize student engagement. She reported that the past NGWL sessions were scheduled through Inside the Outdoors; however, OCWD is now running the program, so interested schools should book directly with OCWD. Ms. Nettles advised that once the new program starts, staff will begin promoting it.

ADJOURNMENT

There being no further business to come before the Committee, the meeting was adjourned at 5:21 p.m.

DISCUSSION/ANALYSIS

Since startup in 2008, GWRS continues to produce water that meets regulatory requirements. The quality of the secondary effluent received from the Orange County Sanitation District (OC San) continues to meet all water quality requirements while operating in the nitrified/denitrified (NDN) mode. The GWRS Microfiltration (MF) and Reverse Osmosis (RO) treatment processes have benefited in overall operational improvements as a result of OC San's efforts to successfully maintain stable operation in the NDN mode.

On December 12, 2022, OC San Plant 2 water was introduced to GWRS for use in normal production for the first time. This marked a milestone in the GWRS Final Expansion construction project that now allows for functional use of the newly constructed facilities at OC San Plant 2. GWRS production was able to go above 100 million gallons per day (mgd) as of December 12, 2022 as a result of this milestone.

The average daily production for the quarter, October through December 2024 was 103 mgd. Production was limited during this reporting period of October to December 2024 due to a major treatment plant issue at OC San that reduced available flows to GWRS. The impactful OC San issue was a major leak and subsequent pump failures to the Plant No. 1 Sunflower trunkline and pump station. This resulted in a reduction of Plant No. 1 flows and an increase to Plant No. 2 flows. In addition, Plant No. 2 experienced failures of two "A" side primary clarifiers that are used to treat the non-reclaimable flows. The increase in flows to Plant No.2 along with the loss of two "A" side primary clarifiers required the

headworks to be de-segregated to accommodate the higher flows. This resulted in Plant No. 2 flows not being available to GWRS until the headworks can be re-segregated to remove Santa Ana River Interceptor non-reclaimable flows.

This Sunflower trunkline and pump station issues at Plant No. 1 started on April 30, 2024 and initially limited GWRS production to 55 mgd until May 21, 2024. Then, on May 21, 2024 a partial resolution of the issue allowed for higher flows to Plant No.1 and an increase in GWRS production to 90 mgd. However, OC San did not resolve the Sunflower pump station issue until November 14, 2024 thus limiting GWRS production to 90 mgd for a total duration of ten months. This production rate is well below the 130 mgd capacity of the GWRS after the final expansion project completion. As of November 14, 2024 GWRS has been operated at average flow of 115 mgd with the resolution of the Sunflower Pump Station issues and restoration of OC San Plant 2 flows.

Operation at a reduced production flow of 90 mgd from the beginning of the current 2024-2025 fiscal year (which started on July 1, 2024) until November 14, 2024 will result in OCWD not meeting the GWRS fiscal year production goal of 128,000 acre-feet (af).

The GWRS effluent production for the months of October through December 2024 is shown in the following tables:

GWRS EFFLUENT PRODUCTION (October - December 2024)

	October 2024 (million gallons)	October 2024 (acre-feet)
Mira Loma, Kraemer/Miller Basin Recharge, Mid Basin Injection, Artic, and Canyon Power	2,294	7,041
Seawater Intrusion Barrier	563	1,728
Total	2,857	8,769

	November 2024 (million gallons)	November 2024 (acre-feet)
Mira Loma, Kraemer/Miller Basin, Recharge, Mid Basin Injection, Artic and Canyon Power	2,509	7,700
Seawater Intrusion Barrier	512	1,573
Total	3,021	9,273

	December 2024 (million gallons)	December 2024 (acre-feet)
Mira Loma, Kraemer/Miller Basin Recharge, Mid Basin Injection, Artic and Canyon Power	3,095	9,497
Seawater Intrusion Barrier	531	1,628

Total	3,626	11,125
--------------	--------------	---------------

The first graph shows the actual fiscal year 2024/2025 production to date compared to the target production of 128,000 af. As of December 31, 2024, the GWRS Fiscal Year 2024-2025 production total is 54,315 af which is 10,210 af below the target production of 64,525 af. As explained earlier in this report, the production short fall in this reporting period was expected due to the Sunflower trunkline and pump station issues at OC San Plant No. 1 limiting flows available to GWRS. The second graph shows the GWRS production flows sent to recharge versus the seawater intrusion barrier for calendar year 2024 highlighting key events that have limited flows during that period.
