1. Minutes of Previous Meeting

The minutes of the GWRS Steering Committee meeting held April 14, 2025, are approved as presented.

MATTER FOR CONSIDERATION

2. GWRS Steering Committee Schedule Change

Executive Director of Operations/GWRS Mehul Patel recalled that at the April Committee meeting the Chair requested staff provide a couple of options for a possible change in meeting frequency; two options were proposed: 1) maintain quarterly meetings and 2) reduce to biannual meetings with the option of additional meetings to be requested if specific topics arise or staff identifies a need. Chair Gallager added that both Boards are committed to delivering the best value to the ratepayers but also looking for opportunities to improve efficiency. He added that past meetings have primarily focused on reviewing operational performance, which may no longer require such frequent discussion. OC San Director Wanke suggested moving forward with three meetings a year to see how it works and revisiting the issue at a later date.

Upon motion by Director Wanke, duly seconded and carried [6-0], the motion of the GWRS Steering Committee Meetings from Quarterly to three meetings a year starting in January 2026 passed:

INFORMATIONAL ITEMS

3. GWRS Operations Update

Mr. Patel reported that the daily production for the quarter, April to June 2025, was 103 mgd. He stated that production was limited during this period due to a planned one-week outage from June 2 to June 6. He stated that the GWRS Final Fiscal Year 2024-25 production was 113,177 acre feet which is a record for GWRS. He shared high groundwater levels limited injection flows to seawater intrusion barrier and mid-basin well.

4. GWRS Second Quarter Outreach Report (April – June 2025)

Director of Public Affairs Gina Ayala reported that for the second quarter of 2025 a total of 32 GWRS tours were conducted accounting for 533 guests. She shared there have been some tour enhancements that include a new tour video, new interactive elements for student engagement and noted that tours are being customized for each group via pre-tour surveys and correspondence to meet each group's needs. She announced a new tour bus partnership pilot program with OC San that includes use of the OC San tour bus for up to 5 tours per year. She highlighted upcoming events including, OC San Wastewater 101 Citizens Academy beginning September 2, Groundwater Adventure tours: September 25 for staff and October 23 for the public and the formation of an Ad Hoc committee to explore and update meeting room and displays.

ADJOURNMENT

There being no further business to come before the Committee, the meeting was adjourned at 5:33 p.m.

DISCUSSION/ANALYSIS

Since startup in 2008, GWRS continues to produce water that meets regulatory requirements. The quality of the secondary effluent received from the Orange County Sanitation District (OC San) continues to meet all water quality requirements while operating in the nitrified/denitrified (NDN) mode. The GWRS Microfiltration (MF) and Reverse Osmosis (RO) treatment processes have benefited in overall operational improvements as a result of OC San's efforts to successfully maintain stable operation in the NDN mode.

On December 12, 2022, OC San Plant 2 water was introduced to GWRS for use in normal production for the first time. This marked a milestone in the GWRS Final Expansion construction project that now allows for functional use of the newly constructed facilities at OC San Plant 2. GWRS production was able to go above 100 million gallons per day (mgd) as of December 12, 2022 as a result of this milestone.

The average daily production for the quarter, October through December 2025 was 102 mgd. The quarterly average is lower than the previous quarter due to a planned one-week outage from June 2 to June 6. Production was again limited during this reporting period of October to December 2025 due to limited recharge capacity due to high groundwater levels. This includes a decrease in both seawater intrusion barrier and mid-basin injection flow requirements. This has resulted in a maximum production limit of 115 mgd on a day-to-day basis. Then production was further limited to 100 to 110 mgd since September 26, 2025 due to preventative maintenance at GWRS requiring removal of one product water

distribution pump. Product Water Pump A01 was removed for refurbishment since it was never inspected since its installation in 2008. The GWRS requires all five product water pumps to operate at the full design capacity of 130 mgd. This has led to a lower than average production over the last quarter period of October to December 2025.

Operation at a reduced production flow of 100 to 105 mgd since September 26, 2025 along with continued high groundwater levels limiting injection demand resulted in falling short of the GWRS fiscal year production goal to date for fiscal year 2025-2026.

The GWRS effluent production for the months of October to December 2025 is shown in the following tables:

**GWRS EFFLUENT PRODUCTION
(October to December 2025)**

	October 2025 (million gallons)	October 2025 (acre-feet)
Mira Loma, Kraemer/Miller Basin Recharge, Mid Basin Injection, Artic, and Canyon Power	2,511	7,705
Seawater Intrusion Barrier	586	1,798
Total	3,097	9,503

	November 2025 (million gallons)	November 2025 (acre-feet)
Mira Loma, Kraemer/Miller Basin, Recharge, Mid Basin Injection, Artic and Canyon Power	2,633	8,081
Seawater Intrusion Barrier	494	1,516
Total	3,127	9,597

	December 2025 (million gallons)	December 2025 (acre-feet)
Mira Loma, Kraemer/Miller Basin Recharge, Mid Basin Injection, Artic and Canyon Power	2,754	8,453
Seawater Intrusion Barrier	424	1,300
Total	3,178	9,753

The graph below (reconfigured from past reports to now be shown as a bar chart per committee member direction) shows the actual fiscal year 2025/2026 production to date compared to the target production of 128,000 af. As of December 31, 2025 the GWRS Fiscal Year 2025-2026 production total is 60,000 af which is 4,525 af below the target production of 64,525 af. As explained earlier in this report, the production short fall to date for the current fiscal year as compared to the production goal was expected due to flows available to GWRS as well as high groundwater levels limiting injection flow demands.
